1.0 INTRODUCTION

The Shell Standard Legend is the Shell standard for symbols applied in hydrocarbon exploration and petroleum engineering. The beginnings of the document can be traced back for some 95 years with the publication of Dr. Erb's report *Uniformity in Geological Reports* in 1917 and consequently its contents reflects both long established and recently introduced practices, as well as international conventions.

The aim of this document is to promote a standard for communication within Shell's worldwide operating organisation, and within industry and academia.

This standard legend has been generated from the online SSL symbol table, which is available from the Shell intranet, <https://eu007-sp.shell.com/sites/SSL/SitePages/Home.aspx> where it is maintained. The standard legend is based on the SSL 1995 and the addendum for wells 2002. The symbol sets from both publications have been completely reviewed and all elements in the SSL 1995 not pertaining to map symbology have been removed.

During the 2002 review of the SSL in preparation for use in ArcGIS all symbols were given a unique number. This number is partly based on the section number as found in SSL 1995, conform the numbering that was already in use for that edition. To keep the logic of that numbering system the chapter and section definitions of the SSL 1995 have been kept and are still used today.

The Shell Standard Legend is classed as an unrestricted document.

Earlier publications (1976, 1995) supported the convention that oil is red and gas is green. To support mapping for different regions or government requirements, 2 versions of this document have been created: an **oil=green** and an **oil=red** version. Each version consistently uses one colour convention throughout the document.

A short history of the SSL (document references found through EP Catalog)

1917	Uniformity in Geological Reports
1932	Standard legend for field sections
1934	Fourth edition published by the BPM production department (copy available)
1954	Standard legend production department
1958	Not found, but referenced in 1976 edition
1976	Referenced in 1995 edition (front page available)
1995	Widely published edition, supplemented with tapeworm and CD
2002	Addendum wells and codes for all symbols (ArcGIS version)
2012	updated publication generated from a symbol database

46223	Linear high, anticlinorium, major regional high or axis of uplift	
46224	Linear low, synclinorium, major regional low or basin axis	
46225a	Outline of basin subsidence	
472101a	Fault, dip of fault plane unknown, barbs on downthrown side	
472101c	Alternative fault symbol. Fault, dip of fault plane unknown, barbs on downthrown side	
472102a	Reverse fault, unspecified high dip angle (>30°) (barbs on the upthrown block)	
472103a	Overthrust, unspecified low dip angle (<30°) (barbs on the upthrown block)	
472104	Transcurrent fault - wrench fault	

Code	Description	Image
472201a	Extensional normal fault, re-activated as high angle reverse fault during subsequent phase of compression, i.e. inverted half graben	
472202a	Low angle overthrust, re-activated as normal fault or detachment during subsequent phase of extension or relaxation	
472301a	Fault position approximate, heave unknown	
472301c	Fault position approximate, heave unknown (alternative symbol)	
47301a	Flexure in general, points indicate downdip	

5.0 GEOCHEMISTRY

5.1.1 Source Rock Type

5.2.1 Maturity Zones

Code	Description	Image
51111	Moderate source rock, Oil prone, I & II, Hio 500	
51112	Good source rock, Oil prone, I & II, Hio 500	
51113	Excellent source rock, Oil prone, I & II, Hio 500	
51114	Moderate source rock, Mixed Oil & Gas, III/II & II/III, Hio 200-500	
51115	Good source rock, Mixed Oil & Gas, III/II & II/III, Hio 200-500	
51116	Excellent source rock, Mixed Oil & Gas, III/II & II/III, Hio 200-500	
51117	Moderate source rock, Gas prone, III, Hio < 200	
51118	Good source rock, Gas prone, III, Hio < 200	
51119	Excellent source rock, Gas prone, III, Hio < 200	
51120	Moderate source rock, Unknown, No HI	
51121	Good source rock, Unknown, No HI	
51122	Excellent source rock, Unknown, No HI	
51123	Barren	
52101	Immature	
52102	Mature for oil generation	
52103	Mature for gas generation/Postmature for oil generation	
52104	Postmature for both oil and gas	

6.0 GEOPHYSICS

6.1.3.3 Seismic Stratigraphy

613302	Maximum flooding surface	
613303	Ravinement/transgressive/flooding surfaces	
613304	Highstand systems tract	
613305	Transgressive systems tract	
613306	Lowstand systems tract	
613307	Topsets, siliciclastics	
613308	Foresets, siliciclastics	
613309	Foresets, siliciclastics (optional)	
613310	Bottomsets, siliciclastics (pelagics, hemipelagics)	
613311	Debris flows/slumps	
613312	Levees (submarine channels)	
613313	Incised valley and submarine canyon fill (undifferentiated)	
613314	Basin floor fan (e.g. amalgamated channel complex, sheet sands and lobes)	
613315	Topsets, carbonates (including lagoonal facies)	
613316	Carbonate platform edge (buildups/shoals)	
613317	Carbonate slope deposits	
613318	Onlap	
613319	Downlap/clinoforms (undifferentiated)	

Code	Description	Image
613320	Toplapping clinoforms	
613321a	Final offlap break (shelf margin)	
613322	Channel/canyon morphology	
613323	Mounded geometries (undifferentiated)	
613324	Levee channel	
613325	Carbonate reef	
613326	Volcanic cone	
613327	Retrogressive/rotational slump	
613328	Chaotic facies
